## MENINGITIS VIGILANCE FOR AFRICA

## Bulletin No. 009

## Issued on March 19, 2019

Valid until March 28, 2019

## SUMMARY

- An increase of the meningitis cases was observed between 8<sup>th</sup> and 9<sup>th</sup> weeks over Burkina Faso, Cameroon, Niger, Nigeria, Chad and Togo. The occurrence of meningitis decreased over Benin, Ivory Coast, Ghana, and Mali.
- High vigilance is needed for meningitis cases over southern Mauritania, central Mali, central Niger, Chad, northern Nigeria, and Cameroon, and Sudan.
- Moderate vigilance is required over central and eastern Senegal, southern Mali and Niger, northeastern Nigeria, southern Chad, and South Sudan.
- Low to no vigilance is needed over the remaining parts of the meningitis belt.

(Semaines notifiées / Reported weeks 01-09)

FIGURE 3 – Inventory of meningitis occurrence in Africa during the first nine weeks of year 2019. Data source : https://www.who.int/emergencies/diseases/meningitis/meningitis-bulletin-9-2019.pdf?ua=1

Very dry atmospheric conditions (relative humidity below 20 %) was observed over eastern Senegal, Mauritania, Mali, Niger, northeastern Nigeria, Chad, and Sudan during the week from 9 to 16 March 2019 (Figure 4). Figure 4 indicates that relative humidity between 20 and 40 % prevailed over South Sudan, central Senegal, northern Uganda, southern Mali, central Burkina Faso, central Nigeria and northern Guinea. It also shows that wet (relative humidity above 40 %) atmospheric conditions were recorded over the coast of the remaining parts of the meningitis belt.

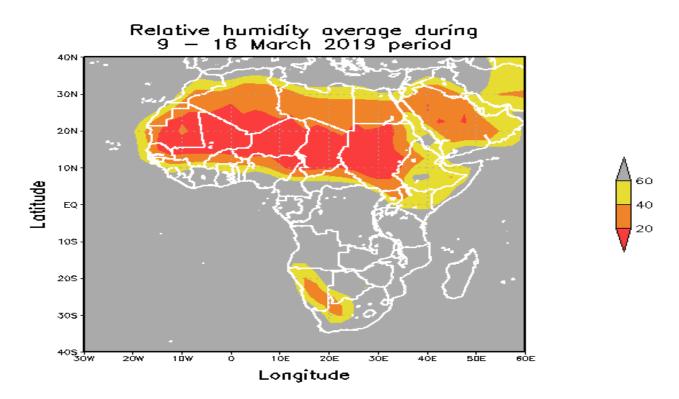

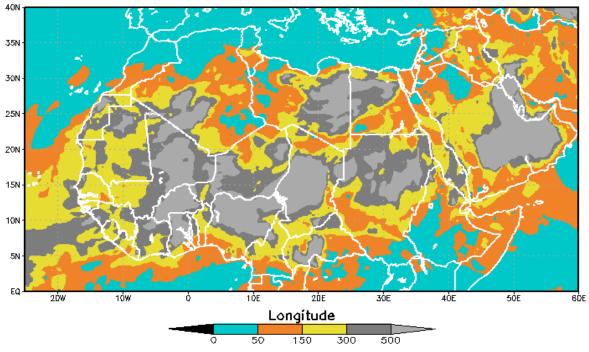

FIGURE 4 – Mean relative humidity (%) for the period from 9 to 16 March 2019.

Figure 5 shows that high surface dust concentrations were observed over the West Africa on 16<sup>th</sup> March 2019 at 00 :00 UTC. Highest values of surface dust concentrations are observed over western Senegal, eastern and northern Mauritania, southern Algeria, northern Mali, Burkina Faso, central and southern Niger, Nigeria, western Cameroon, Libya, central Chad, Sudan, Ghana, Ivory Coast, and Togo.

Surface dust concentration on 16 March 2019 at 00:00 UTC

FIGURE 5 – Surface dust concentration (µg m<sup>3</sup>) estimated on March 16, 2019 at 00 :00 UTC from NASA-GEOS data.

Figure 6 shows that during the week from 9 to 16 March 2019, the ITD moved further northward and the Harmattan flow was observed over Senegal, Gambia, central and northern Mali, northern Burkina Faso, Mauritania, Niger, northern Nigeria, Chad, and Sudan. It also indicates the installation of the monsoon flow over the Gulf of Guinea countries. This flow favors the cessation of the meningitis occurrence in this area.

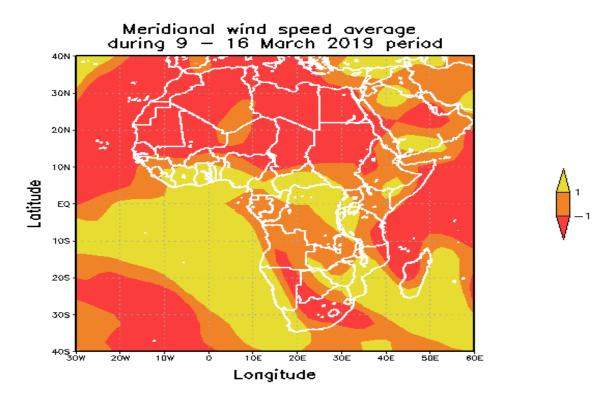

FIGURE 6 – Mean meridional wind speed (m s<sup>-1</sup>) for the period from 9 to 16 March 2019.
